Attn:
Craig DeGeorge
135 Rt 73 South
West Berlin, NJ 08091

Dear Craig,

TAB Shredding Inc would like to amend our site plan to include a concrete ramp and pad on the rear (North side) of our building.

The structure will consist of a ramp, approx 26' long by 15' wide, a pad built at building floor height, approx 15'x15', and a 15'x44' pad at grade along the North wall of the building to accommodate our compactor. The ramp will be in line with an existing bay door. No modifications will be made to the building structure.

The ramp will be constructed of concrete, at least 6" thick. One side will tie into the existing wall, the other (West) side will be cinder block. A retaining wall will also be constructed on the West side to prevent any material that may spill onto the ramp from escaping. The wall will be constructed of block or steel, 4-6 feet high.

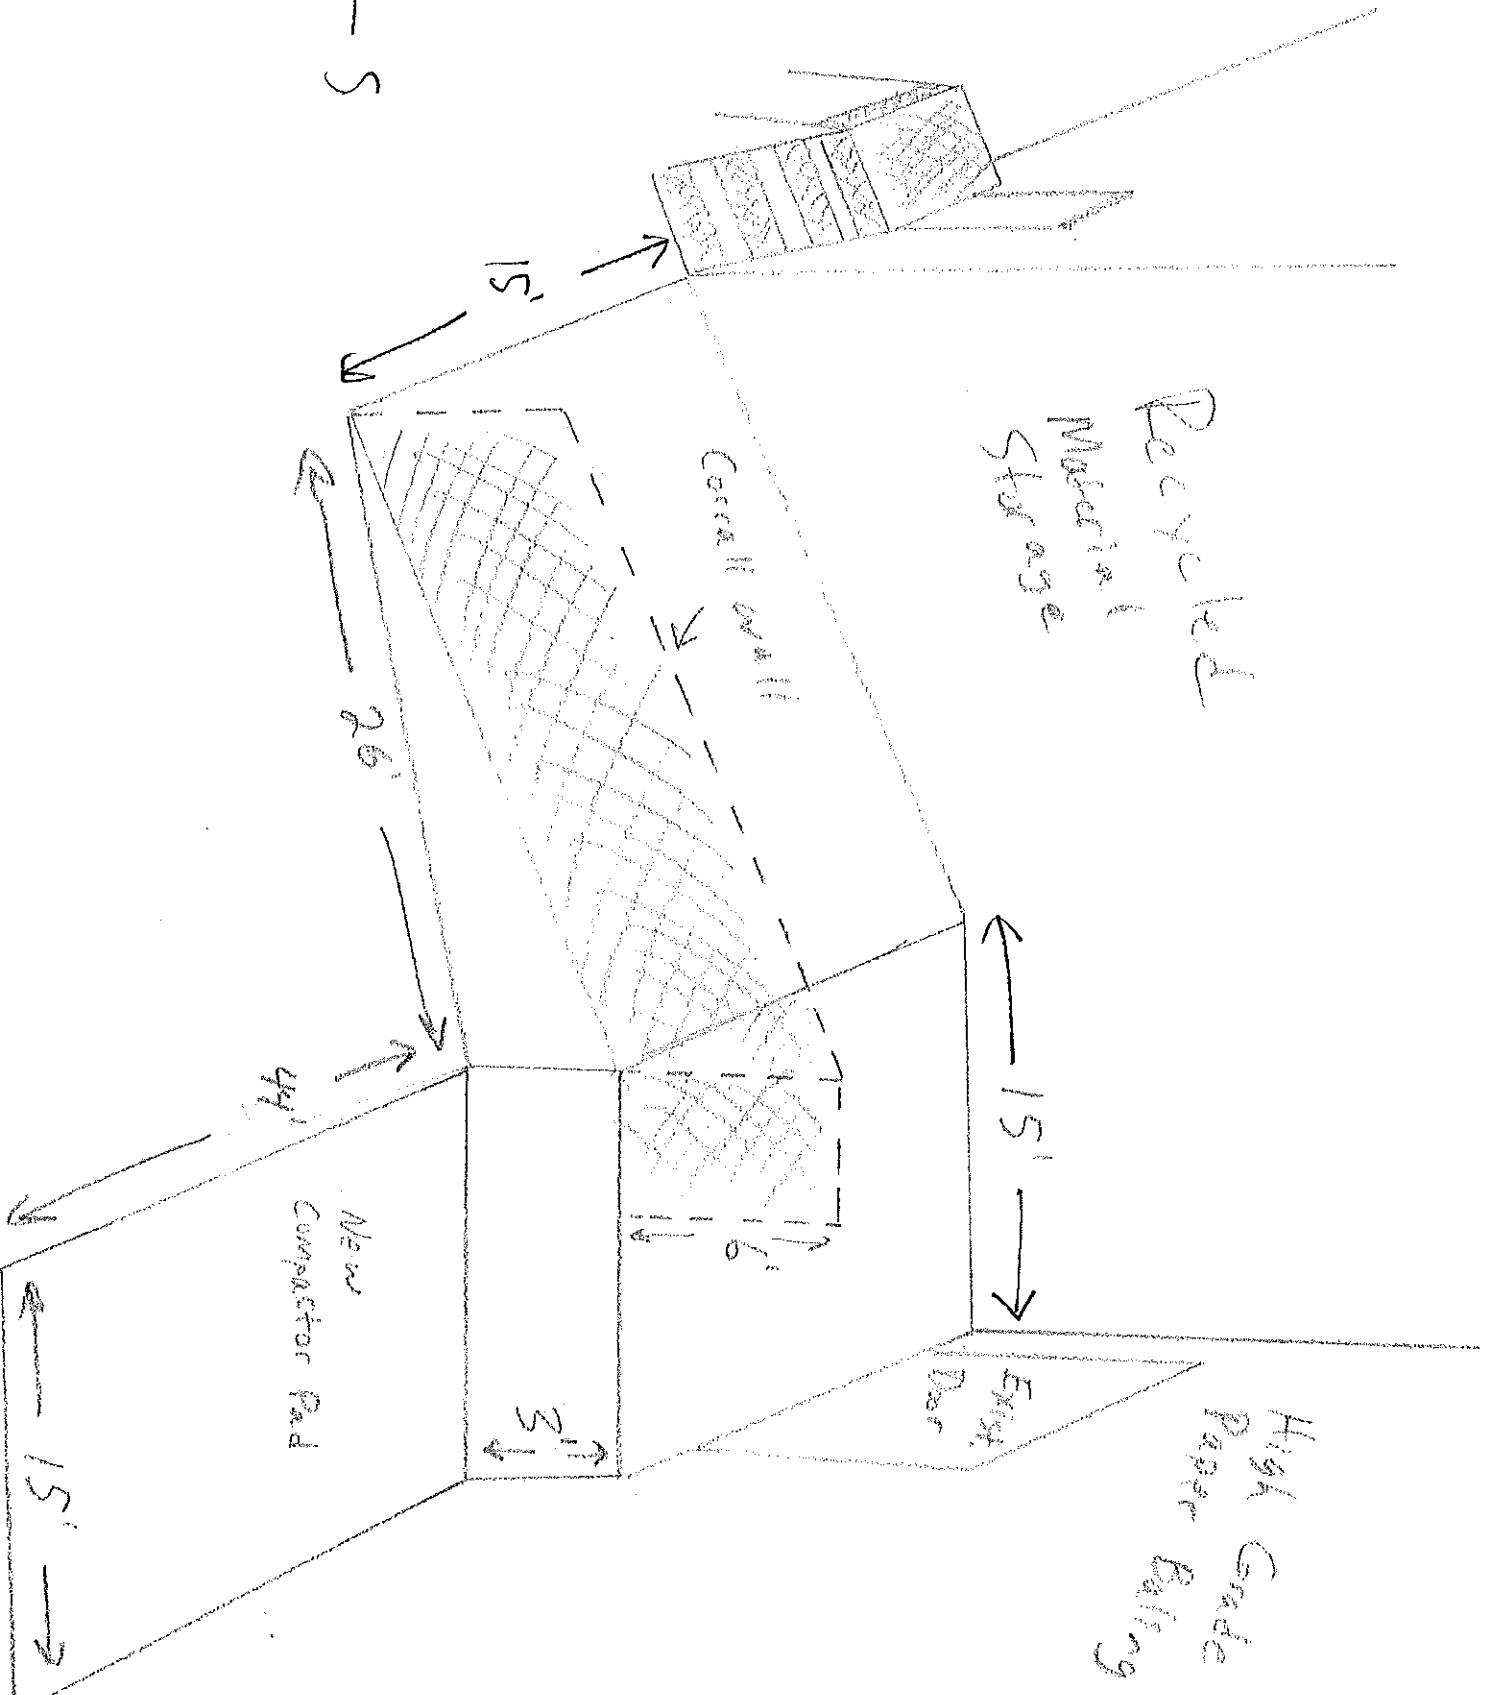

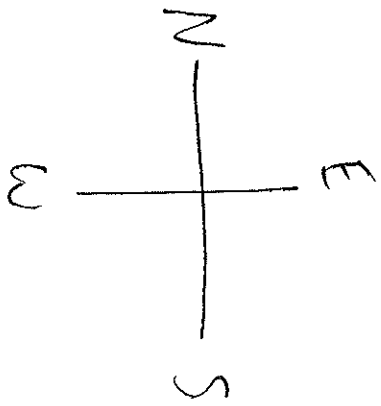

See attached drawings, and please contact me with any questions.
